

# Long-Term Solution

*Central Power Station – Today's Method*

# Long-Term Solution

## *Active Power Distribution Mgmt – Future Method*

# Long-Term Solutions

## *Independent Energy Conservation Authority*

- Create an independent body to assist government and utilities to create and managed energy conservation programs
- This Authority will work on financial solutions to assist with small and large scale renewable energy projects
- This Authority will work with Government in reviewing Independent Power Producers to ensure fair competition and open vetting process between the private and public stakeholders
- This Authority will examine ways to create offsetting carbon credits to help those companies trying to meet LEED emission standards

# Long-Term Solutions

## *Creating National Energy Plan*

- Government implements a National Energy Plan
- Plan will address energy efficiency standards for residential and commercial appliances
- Plan will establish building codes and standards for residential and commercial properties which are cross-referenced in the 2008 Bermuda (Development) Plan
- Plan will make changes to the Duty Tariff Act to coincide with energy conservation initiatives
- Plan will provide guidance on energy pricing considering future changes to how power is generated on the island
